

Improvements on the surfaces of the tennis courts

By Andrea Montes de Oca, Administrator
Tennis Academy of Valle del Sol

During these first weeks of January, we are installing a new surface called Nova Sports Semi-slow on courts 7 and 8 of the Tennis Academy of Valle del Sol.

The work is being done by the MH Recubrimientos a coating company. The new surface is made up of an acrylic mixture in three layers. The first layer seals the base asphalt and corrects imperfections, the second fills the surface with sand and the third gives the final finish, providing the pigment and offering a greater comfort to our player's game.

The color selected for the courts is the dark green to go with the green grass on the sides. Don Manuel Hidalgo, our Director Academy, says that the Dark green is an excellent choice because it has a natural anti-glare component for the outdoor courts, allowing the player a better view of the ball when playing on the court.

Last year, we also made improvements on courts 9 and 10, with a technique very similar and a very satisfactory result for all our customers.

Again, we are very proud that we are able to continue performing the necessary improvements in our Academy and we thank them for that, and for having selected Valle del Sol Academy as a learning center where tennis can be enjoyed.

Application of the first layer on courts 7 and 8.
